FOR IMMEDIATE RELEASE

Indji Systems Secures New U.S. Patent for Hazard–Asset Threat Alerting, Strengthening Indji Watch™ for Renewable Energy and Utility Networks

Los Angeles, CA – Oct 13, 2025 – *Indji Systems Inc.*, provider of the market-leading **Indji Watch™** SaaS platform, today announced that the U.S. Patent and Trademark Office has granted **US12380794B2**, titled “*Alert Generation System and Method*.”

This new patent expands upon Indji’s existing intellectual property (including US10089854B2) and provides extended protection for innovations that directly benefit renewable energy and electrical network operators across the United States.

“This new patent demonstrates our ongoing commitment to innovation and strengthens our leadership in environmental hazard monitoring,” said **Adam Hender, CEO of Indji Systems Inc.** “It extends our IP into the specific challenge of dynamically tracking hazards as they threaten assets, ensuring our customers can operate safely and confidently in increasingly volatile conditions.”

What’s New in This Patent

- Explicit modelling of *hazards* (such as lightning, hail, wildfires) and *assets* (such as wind turbines, solar arrays, or transmission lines).
- Dynamic updates as hazards evolve, ensuring alerts remain accurate in real-time.
- Smarter alerting based on proximity, trajectory, and overlap between hazards and assets.
- Long-term IP protection well into the 2030’s, giving customers confidence in Indji’s continued market leadership.

Customer Impact

Indji Watch, powered by this patented technology, helps renewable energy operators and utilities:

- Protect critical infrastructure from severe weather and environmental threats.
- Meet insurance and compliance requirements (e.g., auto-stow hail protection for solar trackers).
- Improve operational efficiency with fewer false alarms and more actionable alerts.

About Indji Systems

Indji Systems Inc. (U.S. subsidiary of Integrate Systems Pty Ltd, Australia) develops and operates **Indji Watch™**, a patented SaaS platform for natural hazard monitoring and threat alerting. Indji Watch is trusted by leading renewable energy companies, utilities, and transmission operators across North America and globally. For more information, visit: www.indjiwatch.com
